DETAILED ACTION

1 This communication is in response to applicant's amendment to a final office action, which was filed May 19, 2006.

2 Arguments to claims 1-24, 29 and 31 have been entered and made of record in the application of Clercq et al., "Remote control with selective key illumination" filed on June 25, 2003.

Claims 1-24 and 31 are as previously presented.

Claim 29 is as previously amended.

Claim 25-28, 30 and 32-40 are as previously cancelled.

Claims 1-24, 29 and 31 are pending.

Allowable Subject Matter

3 Claims 1-24, 29 and 31 are allowed as evident by applicant's arguments.

4 The following is an examiner's statement of reasons for allowance: The combined prior arts of record disclose or suggest a remote control system comprising a button having an associated means for indicating that the button may be operated to interact with interactive program content, a receiving circuit for accepting a transmission

received from a source external to the remote control, a controlling circuit linked to the receiving circuit and the means for indicating, where the controlling circuit functions to activate the means for indicating in response to receipt of the transmission by the receiving circuit, and a transmission circuit for transmitting a signal to a target external to the remote control in response to activation of the button .

5 However, the combined prior arts of record fail to disclose or suggest a remote control system comprising a button having an associated means for indicating that the button may be operated to interact with interactive program content, a receiving circuit for accepting a transmission received from a source external to the remote control, a controlling circuit linked to the receiving circuit and the means for indicating, where the controlling circuit functions to activate the means for indicating in response to receipt of the transmission by the receiving circuit, and a transmission circuit for transmitting a signal to a target external to the remote control in response to activation of the button, wherein the controlling circuit allows transmission of the signal to the target external to the remote control in response to activation of the button only when the means for indicating is activate.
